SUMMARY

I build AI-native software, and I have spent eighteen years building things that make people more capable with technology. The instinct goes back to 2008: if a job had a process worth automating, I automated it, and that is eventually what pulled me into AI. For the last two years I have gone all-in on full-stack, with React and TypeScript on the front end, Node on the back, and native C++ when a problem demands it. Today I am architecting and rolling out an AI enablement platform to roughly 4,000 employees, with Claude itself as the teacher. A master's in adult education and a long career designing how people learn are why I build for real capability rather than clicks and completion. Twenty-five years as a working musician and producer are where my instinct for creative tools comes from. What I love most is taking a vague, high-stakes problem and turning it into something that simply works.

TECHNICAL

Front end: TypeScript / JavaScript, React, Tailwind, shadcn/UI, TanStack Query, SVG and animation, interaction design

Back end: Node, Express, Python, REST and API design, Postgres, Drizzle ORM, OAuth, Docker

AI / ML: Claude API, Claude Enterprise plugins and MCP, OpenAI API, ONNX runtime and on-device model inference, prompt and agent design

Tools and craft: Claude Code, Cwork, Vite, object-based and API-first architecture, native audio (C++ / JUCE)

SELECTED BUILDS

FICO AI Enablement Platform. Claude Enterprise plugin, rolling out to ~4,000 employees.

- Powered by Claude to teach employees how to work with AI, generating activities tailored to each person's role and comfort level so everything they learn maps directly to their own job.
- Scaffolding adapts in real time, and progress is scored on capability growth rather than course completion. Sole builder, owned end to end.

Claude Training Studio. A production-grade eLearning authoring tool.

- A timeline-based motion studio for authoring animated Claude training on demand: scenes, camera moves, scripted cursor and typing, and synced audio over a controllable, pixel-accurate Claude stage.
- Commercial-grade editing software, built solo because the tools that do this cost a fortune and none fit exactly what I needed. It produces the training content that runs in the enablement platform.

Taffy. One-button AI drum-mixing plugin (VST3 / AU / AAX).

- Press one button and it returns a finished, professional drum mix: it identifies every mic, fixes phase, sets levels, shapes each drum, and glues the bus, doing the expert engineering work so the producer does not have to.
- Ten ML systems run on-device via ONNX, including multi-mic-aware bleed removal, behind a 60fps in-plugin web UI with a live-spectrum EQ and physics-driven faders. Built solo in C++ / JUCE.

Fluent. Adaptive AI fluency assessment, built solo.

- A standalone web activity that measures how well someone actually collaborates with AI, not how they rate themselves, mapped to a 4D fluency framework: Delegation, Description, Discernment, and Diligence.
- A real computer-adaptive engine raises difficulty as you go, then generates an applied scenario around your own job where you write the prompt and own the result, scored by an LLM-as-judge. One self-contained HTML artifact that runs live on the Claude API.

EXPERIENCE

Education Senior Consultant

2024 – Present

FICO, Integrated Learning Organization

- FICO's primary consultant for AI enablement, leading initiatives across departments company-wide. Promoted ahead of cycle for innovation and engineering work.
- Architect and own the AI Enablement Platform above (a Claude Enterprise plugin), from data model and architecture through interaction design, content, and rollout to roughly 4,000 employees.
- FICO's primary tester and power user of Claude Enterprise, with deep hands-on command of Claude Code, Cowork, and the desktop app.
- Designed the company-wide "GenAI at FICO" training, and run monthly AI enablement workshops for the Integrated Learning Organization plus sessions on prompting, agents, and skill-building.
- Created and host the "AI in Action" live series, including events to 1,000+ live attendees.
- Led enablement for the rollout of Harper, FICO's HR AI assistant, to all employees: career coaching, performance reviews, goal writing, and policy questions.
- Created FICO's process for internal-facing MCP servers and built and shipped the first one at the company, partnering closely with Cyber Security and Corporate IT.

AI Model Training

2024 – Present

DataAnnotation, Freelance

- Trained and evaluated AI models as a freelance contributor, building hands-on intuition for model behavior, failure modes, and data quality.

Director of Laboratory and Simulation Education

2020 – 2024

Anne Arundel Community College, School of Health Sciences

- Oversaw twenty health-science labs and the simulation center, leading a team of six.
- Led lab design and equipment purchasing for a \$115M simulation facility, and managed a \$1M annual operating budget across ten programs with individual projects up to \$12M.
- Built and ran an in-house Standardized Patient program, and designed simulation environments measured by applied performance rather than content completion.

Instructional Technology Project Manager

2012 – 2020

Notre Dame of Maryland University, School of Pharmacy

- Served as director of the School of Pharmacy IT office, running day-to-day technology operations and the simulation center.
- Shipped custom technology solutions and integrations end to end: needs analysis, build, vendor coordination, training, and iteration.

Instructional Designer

2011 – 2012

Laureate Education

- Built scalable digital learning experiences in a large distributed environment and iterated on delivery to hit learning goals.

Earlier: Instructional Technology Specialist and Instructional Design Graduate Assistant, Indiana University of Pennsylvania, 2008 to 2011.

EDUCATION & CERTIFICATIONS

- MA, Adult Education and Communications Technology, Indiana University of Pennsylvania, 2010
- BS, Communications Media (focus in Audio Production), Indiana University of Pennsylvania, 2009
- Project Management Professional (PMP), 2015
